TEXAS STATE Soil & Water conservation board

Texas State Soil and Water Conservation Board Clean Water Act §319(h) Nonpoint Source Grant Program FY 2022 Workplan 22-08

	SUMMARY PAGE
Title of Project	Statewide Delivery of Riparian and Ecosystem Education Program IV
Project Goals	 Facilitate the promotion of healthy watersheds and improve water quality through the delivery of riparian and stream ecosystem education programs with a focus on priority watersheds. Increase citizen awareness, understanding, and knowledge about the nature and function of riparian zones, their benefits, and BMPs to protect them and minimize NPS pollution. Connect landowners with local technical and financial resources to improve management and promote healthy watershed and riparian areas on their land.
Project Tasks	(1) Project Administration; (2) Coordinate and Deliver Riparian Education Programs; (3) TFS Participation in Riparian Team and Program Delivery; (4) Evaluate the Effectiveness of the Riparian Education Trainings; (5) Coordinate Online Riparian and Stream Ecosystem Training Program
Measures of Success	 Deliver a minimum of 24 riparian education programs in prioritized watersheds Coordinate 2 statewide riparian conferences Increase knowledge and understanding of riparian function and implementation of BMPs by individuals participating in the program, as measured by pre-/post-tests and post follow-up evaluation

Project Partners	
Names	Roles & Responsibilities
Texas State Soil and Water Conservation Board (TSSWCB)	Provide state oversight and management of all project activities and ensure coordination of activities with related projects and TCEQ.
Texas A&M AgriLife Research, Texas Water Resources Institute	Provide overall program management including project coordination, submission of quarterly and final reports, marketing, registrations, delivery of riparian education programs, website development and management, and evaluation of program effectiveness.
Texas A&M Forest Service (TFS)	Riparian Team Member: Assist with program development, marketing, and delivery; assist with information on quarterly and final reports.
Texas A&M AgriLife Research and AgriLife Extension	Riparian Team Members: Assist with program development, marketing and delivery.
Texas Parks and Wildlife Department (TPWD)	Riparian Team Member: Assist with program development, marketing and delivery.
USDA-Natural Resource Conservation Service (NRCS)	Riparian Team Member: Assist with program development, marketing, and delivery.
Texas Riparian Association (TRA)	Host website; Riparian Team Member: Assist with program development, marketing, and delivery.
Independent Contractor: Nikki Dictson (IC)	Provide technical expertise and assistance with program planning, development, marketing, registrations, and delivery of the annual riparian symposia.

Project Narrative

Problem/Need Statement

Riparian degradation is a major threat to water quality, in-stream habitat, terrestrial wildlife, aquatic species, and overall stream health. Conversely, proper management, protection, and restoration of riparian areas decrease bacteria, nutrient, and sediment loadings to water bodies; lower in-stream temperatures; improve dissolved oxygen levels; improve aquatic habitat; and ultimately improves macrobenthos and fish community integrity. In Texas, the water quality assessment indicates NPS pollution contributes to approximately 45 percent of the water quality impairments to rivers and streams and 48 percent of the water quality impairments to lakes in Texas. The continuation of the *Texas Riparian and Stream Ecosystem Education* program (TSSWCB #18-06, #12-07 and #15-04) would continue outreach across Texas through online methods, landowner workshops, conferences, and professional trainings. Beginning in September 2020, an online version of the Riparian & Stream Ecosystem Training has been offered on the AgriLife Extension Online Course website. This online program covers the same information as the in-person training, offers CEUs, and helps increase participation and therefore overall knowledge of NPS pollution, water quality, and the importance of riparian areas.

To improve the management of these sensitive and vital ecosystems, riparian education programs are needed regarding the nature and function of riparian zones, their benefits, and BMPs for protecting them. This will not only reduce NPS pollution, it will provide tremendous ecosystem service benefits and direct economic benefits to communities. The State of Texas has more than 192,000 miles of rivers and streams that, along with closely associated floodplain and upland areas, comprise corridors of great economic, social, cultural, and environmental value. The health of riparian systems is paramount to stream health. Proper management of riparian areas will protect banks and reduce erosion rates of stream banks and sediment into the streams and reservoirs. Riparian vegetation functions to slow down the overland flow, capture sediment, nutrients, other pollutants and organic matter as well as allow for increased infiltration in the flood plain/riparian area. Higher levels of runoff increase the chances for pesticides, fertilizers, and fecal matter to reach streams and worsen water quality (TWDB, 2013). When management activities leave very little or no vegetation, stream banks become more susceptible to incision and/or widening of the stream during storm and high runoff events (Zygo, 1997). As a stream incises, it may become disconnected and flood the riparian area less frequently or not at all, greatly affecting the ability for water to infiltrate and deposit sediment and nutrients. This results in a loss of forage production, wildlife habitat, and recreational value. In-stream habitat for fish and other aquatic species is also lost as these creeks deepen and widen. In addition, landowners may suffer as more land erodes and falls into the stream, ultimately causing acreage loss and affecting their property value and future economic opportunities.

Changes within a surrounding ecosystem (e.g., watershed) will impact the physical, chemical, and biological processes occurring within a stream corridor. Stream systems normally function within natural ranges of flow, sediment movement, temperature, and other variables, in "dynamic equilibrium." Over the years, human activities have contributed to changes in the dynamic equilibrium of stream systems. The cumulative effects of these activities result in significant direct and indirect changes, not only to stream corridors, but also to the ecosystems or watersheds they are located in. The direct changes include degradation of water quality, decreased water storage and conveyance capacity, loss of habitat for fish and wildlife, and decreased recreational and aesthetic values. While the indirect changes are harder to quantify, such as air quality, decomposition of wastes, and other ecosystem services we all take for granted, there are direct economic benefits that can be calculated.

Streams and riparian zones reflect the sum of impacts of natural and man-induced disturbances of drainage areas or watersheds. Management of the land, streams, and riparian zones affects not only individual landowners, but also livestock, wildlife, aquatic life and ecosystem services for everyone downstream. By understanding the processes, key indicators and impacts of disturbances, activities that hinder recovery, landowners and other citizen-stakeholders can evaluate these systems and improve their management to produce desired conditions.

Benefits of healthy riparian/stream systems:

- High quality habitat for both aquatic and riparian species
- Dissipation of flood energy and reduced downstream flood intensity and frequency

- Higher, longer lasting and less variable baseflow between storm events
- Deposition of sediment in the floodplain, stabilizing it and maintaining downstream reservoir capacity longer
- Debris and nutrient use and filtering in the floodplain to improve water quality and dissolved oxygen levels in the aquatic system
- Riparian vegetation canopies to shade streams and reduce their temperatures, providing a food base for aquatic and riparian fauna
- Fewer invasions of exotic undesirable riparian species
- Higher biodiversity than terrestrial uplands
- "Stabilized" banks, which reduce erosion and protect ownership boundaries
- Increased economic value through wildlife, livestock, timber, and recreational enterprises
- Improved rural land aesthetics and real estate values

This program has held workshops across the state in priority watersheds. Over 55 workshops across the state have had a range of 30-100 attendees for over 2,600 attendees impacting more than 929,000 acres of managed land. Feedback from these workshops has been very positive. Further, TPWD has initiated a statewide riparian education effort targeting areas where there are additional habitat programs. This program will continue to coordinate closely with TPWD on both delivery and content to ensure landowners throughout the state are provided a consistent message of riparian enhancement and protection.

In addition, TWRI has coordinated a Riparian Team with agencies and experts across the state that are working on riparian issues and/or conducting trainings so that there is some coordination to reach more landowners and other interested parties across the large state of Texas. The Riparian Team has linked agencies and universities across the state in partnership and a cohesive effort. This program will continue to implement a riparian education program to support and enhance riparian management and water quality protection efforts by all agencies and organizations actively engaged in watershed planning across Texas.

Project Narrative

General Project Description (Include Project Location Map)

TWRI will continue to coordinate the Riparian Team for this project that is composed of TFS, TPWD, NRCS, TRA, NRA, TSSWCB, TCEQ, TRWD, AgriLife Research and Extension and others to assist with program development, marketing, and delivery. TWRI will continue conducting riparian trainings in targeted watersheds and providing access to the program through web-based outreach and tools, including the addition of an online training program. TWRI will organize instructor teams for each event, composed of members of the Riparian Team, contractors, and others as needed to deliver the Riparian Education Programs.

Riparian workshops will continue to partner with and have expert instructors from the Riparian Team at each training program. The program framework developed and refined in previous projects (TSSWCB #12-07, #15-04 and #18-06) will be used and expanded upon where possible. The trainings will begin with registration and a pre-test followed by indoor classroom style presentations that discuss the nature and function of streams and riparian areas. Local presentations may be added to the schedule to discuss watershed planning efforts or other local issues and efforts. After indoor presentations, attendees will go outside to a stream location where participants can see firsthand the vegetation and functions they learned in the classroom. One group will perform the stream walk instruction and the other will have additional discussions/presentations about stream functions and dynamics, flooding, wild pigs, etc. Each group will then switch and conduct the other task.

The program will be adapted as needed to meet local needs such as addressing riparian issues in watersheds dominated by agriculture, forestry, urban, or a combination thereof. Relevant expertise will be integrated as appropriate into programs to address local needs and may include USDA NRCS, TFS, river authorities, universities, local soil and water conservation districts (SWCDs), county Extension agents (CEAs), and particularly the TPWD Riparian Programs and

TWRI/AgriLife's Urban Riparian and Stream Restoration Program among others to provide needed expertise. An online program has also been developed and will be maintained throughout the project. This will allow people who may not traditionally be able to attend an in person workshop due to scheduling or living outside a priority watershed to take the course at their own pace and expand program reach.

To help market the program, presentations of varying length (15/30/45/60 min.) will be updated as needed and delivered to audiences throughout the state through county Extension programs, watershed stakeholder meetings, Clean Rivers Program Basin steering committees, and other venues. These presentations will be available for delivery by anyone on the Riparian Team. Additionally, key elements and messages will be incorporated into presentations delivered by the TFS Program Coordinator, TWRI, and others on the Riparian Team throughout the state to generate greater interest in riparian protection efforts and increasingly expand requests for the program and its resources. It is anticipated that this will continue to greatly increase program momentum and concurrently initiate implementation of riparian protection concepts by landowners, setting the stage for greater improvements in riparian habitat, stream stability, and water quality.

Riparian Landowner Trainings. Riparian landowner trainings will focus on the nature and function of riparian zones (fluvial geomorphology, hydrology, vegetation), the benefits and direct economic impacts from ecological services of healthy riparian zones, BMPs for enhancing and protecting riparian zones, and technical and financial resources and incentives available for implementing riparian BMPs and riparian protection measures. Riparian education programs will introduce riparian principles, watershed processes, basic hydrology, erosion/deposition principles, riparian vegetation, potential causes of degradation and possible resulting impairment(s), and available local resources including technical assistance and tools that can be employed to prevent and/or resolve degradation. Existing resources and guides will be used for these trainings. Where possible, supplemental regional information and curriculum will be developed. The goal is for participants to better understand and relate to riparian protection activities and encouraged to implement riparian BMPs. Training will emphasize the need for watershed planning that supports maintenance of a natural hydrograph. Restoration of riparian areas degraded by changes to the natural hydrologic regime must be conducted in concert with efforts to remedy those upstream disturbances. Participants will receive a certificate of completion.

TWRI and the Riparian Team will work in coordination with state and local organizations to select and schedule riparian education program locations. Priority will be given to agencies and organizations currently involved in WPP or TMDL processes and those planning future watershed efforts (Fig. 1). Subsequently, additional watersheds will be selected based on impairment status, environmental sensitivity, and/or other priority issues. Due to the size of many watersheds in the state and in an effort to enhance outreach, riparian education programs, in both urban and rural settings, may be offered multiple times and at different locations within prioritized watersheds. In coordination with project partners, approximately eight workshops will be offered each year in the highest priority watersheds for 24 total. Online programs will be available to take year-round for anyone interested in riparian education and can help increase public awareness of the importance of healthy riparian areas.

Coordinate Two Statewide Riparian Conferences. Two conferences will be held to provide additional riparian information to those interested. These may be held in conjunction with TRA, professional societies, river authorities, etc. Conferences will springboard from the momentum at the Riparian Symposiums hosted with the Texas Riparian Association. The Urban Riparian Symposium is held every other year in Texas cities.

Evaluation and Assessment. Trainings (online and in person) will include an evaluation component to assess program effectiveness and inform modifications and enhancements to curriculum content. A two-stage evaluation approach will be used to measure both knowledge and behavior changes in program participants.

Stage 1. A pre-/post-test evaluation strategy will be implemented at the beginning and end of both the face-to-face educational program and web-based training program. The pre-test will ask knowledge-based questions and post-test will measure the same knowledge-based questions to determine participant knowledge increase. The post-test will also include 'satisfaction' questions and 'intentions to change or adopt' questions.

Stage 2. A post follow-up assessment instrument will be sent to participants approximately 6 months post-program, via email, to ascertain what practices were actually adopted 6 months after participating in the program.

Results will be summarized in a project final report. Briefs may also be developed to document and enhance the success of future riparian education and similar training programs.

Project Goals (Expand from Summary Page)

- Facilitate the promotion of healthy watersheds and improve water quality through the delivery of Riparian and Stream Ecosystem Education programs with a focus on priority watersheds via group trainings.
- To increase citizen awareness, understanding, and knowledge about the nature and function of riparian zones, their benefits, and BMPs to protect them and minimize NPS pollution.
- To connect landowners with local technical and financial resources to improve management and promote healthy watershed and riparian areas on their land.

Measures of Success (Expand from Summary Page)

- Deliver a minimum of 24 riparian education programs in prioritized watersheds
- Coordinate 2 statewide riparian conferences
- Track participation in the online riparian course
- Increased knowledge and understanding of riparian function and implementation of BMPs by individuals participating in the program, as measured by pre-/post-tests and 6-month follow-up assessment.

2017 Texas NPS Management Program Reference (Expand from Summary Page)

Components, Goals, and Objectives

Element 1 – Explicit short- and long-term goals, objectives and strategies that protect surface...water

LTG: To protect and restore water quality from NPS pollution through assessment, implementation and education

- 1. Focus NPS abatement efforts ...and available resources in watersheds identified as impacted by NPS pollution.
- 2. Support the implementation of state, regional, and local programs to prevent NPS pollution through assessment ... and education.
- 4. Increase overall public awareness of NPS issues and prevention activities.

STG Three – Education: Conduct education and technology transfer activities to help increase awareness of NPS pollution and prevention activities contributing to the degradation of waterbodies... by NPS.

- Objective A Enhance existing outreach programs at the state, regional, and local levels to maximize the effectiveness of NPS education.
- Objective B Administer programs to educate citizens about water quality and their potential role in causing NPS pollution.
- Objective F Implement public outreach and education to maintain and restore water quality in water bodies impacted by NPS pollution.

Element 2 – Working partnerships.	to appropriate, state,	regional, and local ent	tities, private sector grou	ups, and federal
agencies.				

Element 3 – Balanced approach that emphasizes both statewide NPS programs and on-the-ground management of individual watersheds

Estimated Load Reductions Expected (Only applicable to Implementation Project Type)

EPA State Categorical Program Grants – Workplan Essential Elements

FY 2022-2026 EPA Strategic Plan Reference

Strategic Plan Goal – 5.0 Ensure Clean and Safe Water for All Communities

Strategic Plan Objective -5.2 - Protect and Restore Waterbodies and Watersheds

This workplan supports Goal 5 (Ensure Clean and Safe Water for All Communities) and Objective 5.2 (Protect and Restore Waterbodies and Watersheds) by funding the *Texas State and Soil Water Conservation Board's* NPS Program for state and local planning, education, assessments, watershed restoration and protection, best management practices, and related water quality activities.

Budget Justificat	ion (Federal)	
Category	Total Amount	Justification
Personnel	\$ 116,642	Research Assistant: \$54,000 annually @ 5.07 months – \$23,507 TBD Program Manager: \$64,970 annually @ 3 months – \$16,728 TBD, Program Specialist: \$48,000 annually @ 18 months – \$76,407 *named positions are budgeted with a 3% annual pay increase in all years; TBD positions and graduate students are budgeted with a 3% pay increase in years after year 1 *(Salary estimates are based on average monthly percent effort for the entire contract. Actual percent effort may vary more or less than estimated between months; but in aggregate, will not exceed total effort estimates for the entire project.) *cell phone allowances for project calls/emails during & after business hours & travel are occasionally factored into salaries & fringe, but again, will not exceed overall dollar amount.
Fringe Benefits	\$ 43,435	Fringe for faculty and staff is calculated at 18.8% salary plus \$825 per month. Fringe benefits for eligible students is calculated at 11% salary plus \$560 per month. *(Fringe benefits estimates are based on salary the estimates listed. Actual fringe benefits will vary between months coinciding with percent effort variations; but in aggregate, will not exceed the overall estimated total.) *cell phone allowances for project calls/emails during & after business hours & travel are occasionally factored into salaries & fringe, but again, will not exceed overall dollar amount.
Travel	\$ 17,939	 Travel to 24 trainings statewide throughout the 3-year project duration for 1-2 people including 2 days per diem and 1-day lodging at the GSA state rates; mileage @ state rate and Concur travel fees. Estimates are based on rates for Austin, Corpus Christi, Dallas, Houston, Junction, Waco and the standard rate for areas not known. (\$16,566) Per diem – \$6,084 Lodging – \$5,856 Mileage – \$4,434 Concur fees – \$192 Travel to 2 annual conferences, end of project 3-day advanced training (\$1,373) One conference estimated at San Marcos for one person, 3 days, 2 nights- per diem and lodging (GSA rate) and 131 miles round-trip at state rate plus an \$8 Concur fee – \$579 One conference estimated at Dallas for one person, 3 days, 2 nights-per diem and lodging (GSA rate) and 483 miles round-trip at state rate plus an \$8 Concur fee – \$794
Equipment	\$ 0	N/A
Supplies	\$ 2,400	General project supplies, including, but not limited to nametags, paper, pens, folders, etc. for program materials
Contractual*	\$ 53,229	Subawards: - Texas A&M Forest Service: \$37,114 - Nikki Dictson: \$16,115
Construction	\$ 0	N/A
Other	\$ 63,680	Communications Services (\$12,000) Scholarships for Online riparian program: 500 users/yr @ \$1/user (\$1,500) Printing costs for Riparian Books: (\$12,000) Software licenses including Adobe Creative Suite & Pro, SPSS, GIS (\$650) Conferences fees for staff to riparian conferences (\$2,725) Speaker Fees (\$28,000) Facility Rental Fees (\$4,725) Annual website hosting fee \$360/year (\$1,080) Mailing of materials (\$1,000)

Indirect	\$ 44,599	Per the RFP requirements, indirect costs are limited at 15% of total direct
		costs. \$297,325 Total Direct Costs * 15% = \$44,599

Budget Justificat	ion (Non-Federal)	
Category	Total Amount	Justification
Personnel	\$ 37,339	TWRI Associate Director: \$101,261 annually, 4.17 mos. – \$37,339 *named positions are budgeted with a 3% annual pay increase in all years; TBD positions and graduate students are budgeted with a 3% pay increase in years after year 1 *(Salary estimates are based on average monthly percent effort for the entire contract. Actual percent effort may vary more or less than estimated between months; but in aggregate, will not exceed total effort estimates for the entire project.) *cell phone allowances for project calls/emails during & after business hours & travel are occasionally factored into salaries & fringe, but again, will not exceed overall dollar amount.
Fringe Benefits	\$ 10,459	Fringe for faculty and staff is calculated at 18.8% salary plus \$825 per month. Fringe benefits for eligible students is calculated at 11% salary plus \$560 per month. *(Fringe benefits estimates are based on salary the estimates listed. Actual fringe benefits will vary between months coinciding with percent effort variations; but in aggregate, will not exceed the overall estimated total.) *cell phone allowances for project calls/emails during & after business hours & travel are occasionally factored into salaries & fringe, but again, will not exceed overall dollar amount.
